

How to pack well

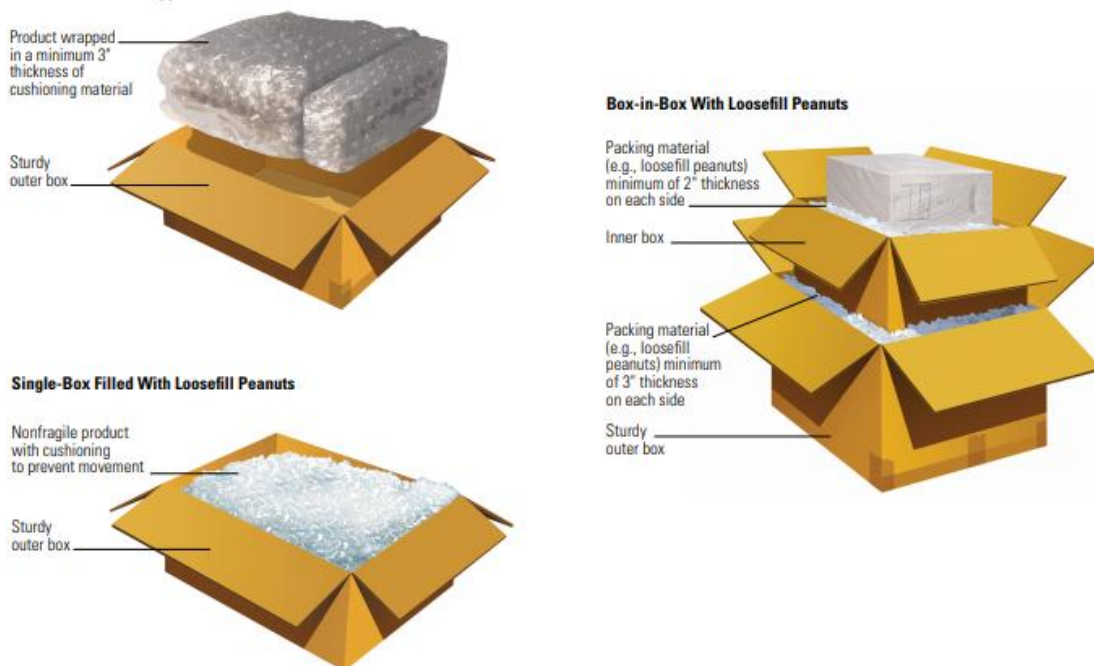

Hello everyone !

Let's talk about "How to pack well " in this month.

A good packing method is able to protect our shipping items during its transportation. Let's follow the following key points to do the packaging work!

The first thing for packing well is to select a strong box, if the items is heavier items, we will need to use double-walled boxes. If using reuse boxes, we will need to make sure it is strong enough and also make sure we tear off the old shipping label on it. If the items we plan to ship is very small, we still need to use at least 7 x 4 x 2 (inch) box to ship.

The second step is choosing cushioning with enough density to keep items from shifting. For example, we can wrap our items with bobble before we put it in box to protect our items.

Now we almost have done. Last step is sealing and labeling. For sealing, choosing proper tape is very important. With your box properly packed, apply at least three strips of packing tape (no duct or masking tape) that is at least 2" wide evenly across all flaps and seams, top and bottom and also use the H taping method. And firmly secure paste the label on the package's largest surface.

Make sure every step done well and then let's send it out!
